A. Which objective terms move which outputs
taste T
composition C
chem. novelty N
mixture M
independent taste (descriptor GBM)
frac. de novo
weight on taste
weight on composition
weight on novelty
weight on mixture
−1.5
−1.0
−0.5
0.0
0.5
1.0
1.5
effect of switching a weight from 0 to its base value
(in sd of the output across runs; 95% CI, OLS, 16 configs x 5 seeds)
B. Set change when one term is removed
Jaccard overlap of molecules used vs full-J set (same seed)
0.0
0.1
0.2
0.3
0.4
0.5
0.6
seed-to-seed noise floor
drop taste
drop composition
drop novelty
